INTRODUCTION

Congratulations on your purchase of the Yamaha XV750. This model is the result of Yamaha’s vast experience in the production of fine sporting, touring, and pacesetting racing machines. It represents the high degree of craftsmanship and reliability that have made Yamaha a leader in these fields.

This manual will give you an understanding of the operation, inspection, and basic maintenance of this motorcycle. If you have any questions about the operation or maintenance of your motorcycle, please consult a Yamaha dealer.
IMPORTANT MANUAL INFORMATION

Particularly important information is distinguished in this manual by the following notations:

⚠️ The Safety Alert Symbol means ATTENTION! BECOME ALERT! YOUR SAFETY IS INVOLVED!

⚠️ WARNING
Failure to follow WARNING instructions could result in severe injury or death to the motorcycle operator, a bystander or a person inspecting or repairing the motorcycle.

⚠️ CAUTION
A CAUTION indicates special precautions that must be taken to avoid damage to the motorcycle.

NOTE:
A NOTE provides key information to make procedures easier or clearer.

NOTE:

- This manual should be considered a permanent part of this motorcycle and should remain with it even if the motorcycle is subsequently sold.
- Yamaha continually seeks advancements in product design and quality. Therefore, while this manual contains the most current product information available at the time of printing, there may be minor discrepancies between your motorcycle and this manual. If there is any question concerning this manual, please consult your Yamaha dealer.
WARNING

PLEASE READ THIS MANUAL CAREFULLY AND COMPLETELY BEFORE OPERATING THIS MOTORCYCLE.

SAFETY INFORMATION

TWO-WHEELED MOTORCYCLES ARE SINGLE TRACK VEHICLES. THEIR SAFE USE AND OPERATION ARE DEPENDENT UPON THE USE OF PROPER RIDING TECHNIQUES AS WELL AS THE EXPERTISE OF THE OPERATOR. EVERY OPERATOR SHOULD KNOW THE FOLLOWING REQUIREMENTS BEFORE RIDING.

HE OR SHE SHOULD:

1. OBTAIN THOROUGH INSTRUCTIONS FROM A COMPETENT SOURCE ON ALL ASPECTS OF MOTORCYCLE OPERATION.
2. OBSERVE THE WARNINGS AND MAINTENANCE REQUIREMENTS IN THE OWNER’S MANUAL.
3. OBTAIN QUALIFIED TRAINING IN SAFE AND PROPER RIDING TECHNIQUES.
4. OBTAIN PROFESSIONAL TECHNICAL SERVICE AS INDICATED BY THE OWNER’S MANUAL AND/OR WHEN MADE NECESSARY BY MECHANICAL CONDITIONS.

SAFE RIDING

1. Always make pre-operation checks. Careful checks may help prevent an accident.
2. This motorcycle is designed to carry the operator and a passenger.
3. The failure of motorists to detect and recognize motorcycles in traffic is the predomining cause of automobile/motorcycle accidents. Many accidents have been caused by an automobile driver who did not see the motorcycle. Making yourself conspicuous appears to be very effective in reducing the chance of this type of accident.

Therefore:

a. Wear a brightly colored jacket.

b. Use extra caution when you approach and pass through intersections, since intersections are the most likely places for motorcycle accidents.

c. Ride where other motorists can see you. Avoid riding in another motorist’s “blind spot”.

4. Many accidents involve inexperienced operators. In fact, many operators who have been involved in accidents do not even have a current motorcycle license.

a. Make sure you are qualified. Also, only lend your motorcycle to experienced operators.

b. Know your skills and limits. Staying within your limits may help you to avoid an accident.

c. We recommend that you practice riding your motorcycle where there is no traffic until you have become thoroughly familiar with your motorcycle and all of its controls.
5. Many motorcycle accidents have been caused by motorcycle operator errors. A typical error made by the operator is veering wide on a turn due to EXCESSIVE SPEED or undercornering (insufficient lean angle for the speed).
   a. Always obey the speed limits and never travel faster than warranted by road and traffic conditions.
   b. Always signal before turning or changing lanes. Make sure other motorists see you.
6. The operator’s and passenger’s posture are important for proper control.
   a. The operator should keep both hands on the handlebars and both feet on the operator footrests during operation to maintain control of the motorcycle.
   b. The passenger should always hold on to the operator, or the seat strap or grab bar if the motorcycle is so equipped, with both hands and keep both feet on the passenger footrests.
   c. Never carry a passenger unless he or she can firmly place both feet on the passenger footrests.
7. Never ride under the influence of alcohol or drugs.
8. This motorcycle is designed for on-road use only. It is not suitable for off-road use.
PROTECTIVE APPAREL

The majority of fatalities from motorcycle accidents are the result of head injuries. The use of a safety helmet is the single most critical factor in the prevention or reduction of head injuries.

1. Always wear an approved helmet.
2. Wear a face shield or goggles. Wind on your unprotected eyes could contribute to an impairment of vision which could delay seeing a hazard.
3. The use of heavy boots, jacket, trousers, gloves, etc. is effective in preventing or reducing abrasions or lacerations.
4. Never wear loose fitting clothing. It could catch on the control levers, footrests, or wheels and cause injury or accident.
5. Never touch the engine or exhaust system during or after operation. They become very hot and can cause burns. Always wear protective clothing that covers your legs, ankles, and feet.
6. A passenger should also observe the above precautions.

MODIFICATION

Modifications made to the motorcycle not approved by Yamaha, or the removal of original equipment, may render your motorcycle unsafe for use and may cause severe personal injury. Modifications may also make your motorcycle illegal to use.
LOADING AND ACCESSORIES

Adding accessories or cargo to your motorcycle can adversely affect stability and handling if the weight distribution of the machine is changed. To avoid the possibility of an accident, extreme caution should be used if adding cargo or accessories to your motorcycle. Use extra care if riding a motorcycle which has added cargo or accessories. Here are some general guidelines to follow if loading cargo or adding accessories to your motorcycle:

LOADING

The total weight of the operator, passenger, accessories and cargo must not exceed the maximum load limit of 235 kg.

When loading within these weight limits, keep the following in mind:

1. Cargo and accessory weight should be kept as low and close to the motorcycle as possible. Be sure to distribute the weight as evenly as possible on both sides of the machine to minimize imbalance or instability.

2. Shifting weights can create a sudden imbalance. Make sure that accessories and cargo are securely attached to the motorcycle before riding. Recheck accessory mounts and cargo restraints frequently.
3. Never attach any large or heavy items to the handlebars, front forks, or front fender. These items, including such cargo as sleeping bags, duffle bags, or tents, can create unstable handling or slow steering response.

**ACCESSORIES**

Genuine Yamaha accessories have been specifically designed for use on this motorcycle. Since Yamaha cannot test all other accessories which may be available, you must personally be responsible for the proper selection, installation and use of non-Yamaha accessories. You should use extreme caution when selecting and installing any accessories.

Keep in mind these guidelines for mounting accessories in addition to those provided under "LOADING".

1. Never install accessories or carry cargo that would impair the performance of your motorcycle. Carefully inspect the accessory before using it to make sure it does not in any way reduce ground clearance or cornering clearance, limit suspension travel, steering travel or control operation, or obscure lights or reflectors.
   a. Accessories fitted to the handlebar or the front fork area can create instability due to improper weight distribution or aerodynamic changes. If accessories are added to the handlebar or front fork area, they must be as lightweight as possible and should be kept to a minimum.
b. Bulky or large accessories may seriously affect the stability of the motorcycle due to aerodynamic effects. Wind may attempt to lift the motorcycle, or the motorcycle may become unstable in cross winds. These accessories may also cause instability when being passed by or passing large vehicle.

c. Certain accessories can displace the operator from his or her normal riding position. This improper position limits the freedom of movement of the operator and may limit control ability. Therefore such accessories are not recommended.

2. Caution must be used if adding electrical accessories. If these accessories exceed the capacity of the motorcycle's electrical system, an electric failure could result, which could cause a dangerous loss of lights or engine power.

**GASOLINE AND EXHAUST GAS**

1. **GASOLINE IS HIGHLY FLAMMABLE:**
   a. Always turn off the engine when refueling.
   b. Take care not to spill any gasoline on the engine or exhaust system when refueling.
   c. Never refuel while smoking or in the vicinity of an open flame.

2. Never start the engine or let it run for any length of time in a closed area. The exhaust fumes are poisonous and may cause loss of consciousness and death within a short time. Always operate your motorcycle in an area that has adequate ventilation.
3. Always turn off the engine before leaving the motorcycle unattended and remove the ignition key. When parking the motorcycle, note the following:
   a. The engine and exhaust system may be hot. Park the motorcycle in a place where pedestrians or children are not likely to touch these hot areas.
   b. Do not park the motorcycle on a slope or soft ground; the motorcycle may fall over.
   c. Do not park the motorcycle near a flammable source, e.g. a kerosene heater, or near an open flame. The motorcycle could catch fire.
4. When transporting the motorcycle in another vehicle, be sure it is kept upright and that the fuel cock is turned to "ON" or "RES" (for vacuum type)/"OFF" (for manual type). If it should lean over, gasoline may leak out of the carburetor or fuel tank.
5. If you should swallow any gasoline, inhale a lot of gasoline vapor, or allow gasoline to get in your eyes, see your doctor immediately. If any gasoline spills on your skin or clothing, immediately wash it off with soap and water and change your clothes.
LOCATION OF THE IMPORTANT LABEL

Please read the following label carefully before operating this motorcycle.

WARNING
Before you operate this vehicle,
read the owner's manual.
1. Rear flasher light
2. Rear shock absorber
3. Fuel tank
4. Front flasher light
5. Front fender
6. Brake pedal
7. Footrest
8. Silencer
9. Rear wheel

17. Main switch
18. Tachometer
19. Brake lever
20. Throttle grip
21. Right handlebar switches
22. Left handlebar switches
**MOTORCYCLE IDENTIFICATION**

**Identification numbers record**
Record the key identification number, vehicle identification number and model label information in the spaces provided for assistance when ordering spare parts from a Yamaha dealer or for reference in case the vehicle is stolen.

1. **KEY IDENTIFICATION NUMBER:**

2. **VEHICLE IDENTIFICATION NUMBER:**

3. **MODEL LABEL INFORMATION:**

   * O *
   * ● *

---

**Key identification number**

The key identification number is stamped on the key. Record this number in the space provided and use it for reference when obtaining a new key.
Vehicle identification number

The vehicle identification number is stamped into the steering head pipe.

NOTE:____________________________________
The vehicle identification number is used to identify your motorcycle and may be used to register your motorcycle with the licensing authority in your state.

Model label

The model label is affixed to the location shown in the figure. Record the information on this label in the space provided. This information will be needed to order spare parts from your Yamaha dealer.
CONTROL FUNCTIONS

Main switch

The main switch controls the ignition and lighting systems. Its operation is described below.

ON:
Electrical circuits are switched on, and the headlight, meter light, and taillight come on. The engine can be started. The key cannot be removed in this position.

OFF:
All electrical circuits are switched off. The key can be removed in this position.

LOCK:
The steering is locked in this position, and all electrical circuits are switched off. The key can be removed in this position. Refer to "Steering lock" (page 5-12) for operation instructions.

P (Parking)
The steering is locked in this position, and the taillight comes on but all other circuits are off. The key can be removed in this position.

NOTE:
Always turn the main switch to "OFF" or "LOCK" and remove the key when the motorcycle is unattended.
Indicator lights

1. Turn indicator lights "TURN"
2. Neutral indicator light "NEUTRAL"
3. High beam indicator light "HIGH BEAM"
4. Oil level indicator light "OIL"
5. Fuel indicator light "FUEL"

Turn indicator lights "TURN"
The corresponding indicator flashes when the turn switch is moved to the left or right.

Neutral indicator light "NEUTRAL"
This indicator comes on when the transmission is in neutral.

High beam indicator light "HIGH BEAM"
This indicator comes on when the headlight high beam is used.

Oil level indicator light "OIL"
This indicator comes on when the oil level is low. This light circuit can be checked by the following procedure.

CAUTION: 
Do not run the motorcycle until you know it has sufficient engine oil.

NOTE: 
Even if the oil is filled to the specified level, the indicator light may flicker when riding on a slope or during sudden acceleration or deceleration, but this is not abnormal.
Oil level indicator circuit check

Turn the main switch to "ON" and the engine stop switch to "RUN".

Oil level indicator light does not come on.

- Put the transmission in neutral or apply the clutch lever, then push the start switch.
  - Oil level indicator light comes on.
    - Engine oil level and electrical circuit are OK. Go ahead with riding.
  - Oil level indicator light does not come on.
    - Ask a Yamaha dealer to inspect electrical circuit.

Oil level indicator light comes on.

- Check engine oil level.
  - Oil level is OK.
  - Oil level is low.
    - Supply engine oil.
Fuel indicator light "FUEL"
When the fuel level drops below approximately 2.5 L, this light will come on. When this light comes on, switch the fuel cock to "RES". Then, fill the tank at the first opportunity.
Fuel indicator circuit check

Turn the main switch to "ON" and the engine stop switch to "RUN".

- Fuel indicator light does not come on.
  - Put the transmission in neutral or apply the clutch lever, then push the start switch.
    - Fuel indicator light comes on.
      - Fuel level and electrical circuit are OK. Go ahead with riding.
    - Fuel indicator light does not come on.
      - Ask a Yamaha dealer to inspect electrical circuit.
  - Fuel indicator light comes on.
    - Check the fuel level.
      - Fuel level is OK.
      - Fuel level is low.
        - Supply fuel.
The speedometer shows riding speed. This speedometer is equipped with an odometer and trip odometer. The trip odometer can be reset to "0" with the reset knob. Use the trip odometer to estimate how far you can ride on a tank of fuel. This information will enable you to plan fuel stops in the future.

This model is equipped with an electric tachometer so the rider can monitor the engine speed and keep it within the ideal power range.

**CAUTION:**

Do not operate in the red zone.
Red zone: 7,000 r/min and above
**Handlebar switches**

1. Pass switch “PASS”
2. Dimmer switch “LIGHTS”
3. Turn signal switch “TURN”
4. Horn switch “HORN”

1. Engine stop switch “ENGINE STOP”
2. Start switch “START”

---

**Pass switch “PASS”**

Press the switch to operate the passing light.

---

**Dimmer switch “LIGHTS”**

Turn the switch to “HI” for the high beam and to “LO” for the low beam.

---

**Turn signal switch “TURN”**

This model is equipped with self-cancelling turn signals. To signal a right-hand turn, push the switch to the right. To signal a left-hand turn, push the switch to the left. Once the switch is released it will return to the center position. To cancel the signal, push the switch in after it has returned to the center position. If the switch is not cancelled by hand, it will self-cancel after the motorcycle has travelled for about 10 seconds or approximately 150 m whichever is greater. The self-cancelling mechanism only operates when the motorcycle is moving. Therefore the signal will not self-cancel while you are stopped at an intersection.

---

**Horn switch “HORN”**

Press the switch to sound the horn.
Engine stop switch “ENGINE STOP”
The engine stop switch is a safety device for use in an emergency such as when the motorcycle overturns or if trouble occurs in the throttle system. Turn the switch to “RUN” to start the engine. In case of emergency, turn the switch to “OFF” to stop the engine.

Start switch “START”
The starter motor cranks the engine when pushing the start switch.

CAUTION: ________________
See starting instructions prior to starting the engine.

Clutch lever
The clutch lever is located on the left handlebar, and the ignition circuit cut-off system is incorporated in the clutch lever holder. Pull the clutch lever to the handlebar to disengage the clutch, and release the lever to engage the clutch. The lever should be pulled rapidly and released slowly for smooth clutch operation. (Refer to the engine starting procedures for a description of the ignition circuit cut-off system.)
Shift pedal

This motorcycle is equipped with a constant-mesh 5-speed transmission. The shift pedal is located on the left side of the engine and is used in combination with the clutch when shifting.

Front brake lever
The front brake lever is located on the right handlebar. Pull it toward the handlebar to apply the front brake.

Rear brake pedal
The rear brake pedal is on the right side of the motorcycle. Press down on the brake pedal to apply the rear brake.
**Fuel tank cap**

1 Open

**TO OPEN:**
Insert the key and turn it 1/4 turn clockwise. The lock will be released and the cap can be opened.

**TO CLOSE:**
Push the tank cap into position with the key inserted. To remove the key, turn it counterclockwise to the original position.

---

**NOTE:**
This tank cap cannot be closed unless the key is in the lock. The key cannot be removed if the cap is not locked properly.

---

**WARNING**
Be sure the cap is properly installed and locked in place before riding the motorcycle.
AT THE FIRST OPPORTUNITY, BE SURE TO MOVE THE LEVER TO "ON" AFTER REFUELING.

NOTE:
The fuel cock operates on vacuum from the engine when set at "ON" or "RES". If the line connecting the cock to the carburetor intake manifold is not connected or has a leak, the cock will not function properly.

PRI: This indicates prime. With the lever in this position, fuel flows whether the engine is running or not. If the fuel tank is completely empty, refill the tank and move the lever to "PRI" to prime the carburetors. Move the lever to "ON" after starting the engine.

The negative pressure fuel cock supplies fuel from the tank to the carburetors while filtering it also.
The fuel cock has the following three positions:
ON: With the lever in this position, fuel flows if the engine is running, but stops if the engine is not running.
RES: This indicates reserve. If you run out of fuel while riding, move the lever to "PRI", start the engine, then move the lever to "RES". FILL THE TANK
Starting a cold engine requires a richer air-fuel mixture. A separate starter circuit supplies this mixture.
Move in direction (a) to turn on the starter. Move in direction (b) to turn off the starter.

The steering is locked when the main switch is turned to "LOCK". To lock the steering, turn the handlebars all the way to the left or right. With the key at "OFF", push it into the main switch and release it, turn it counterclockwise to "LOCK", and remove it. To release the lock, turn the key to "OFF".
WARNING

Never turn the key to "LOCK" when the motorcycle is moving.

1. Remove the storage box cover on the left side and the battery cover on the right side.
2. Remove the seat by removing the bolts.
3. When reinstalling the seat, insert the projection on the rear of the seat into the holder on the frame, then tighten the bolts.
4. Reinstall the storage box cover and the battery cover.

NOTE: Make sure that the seat is securely fitted.

To open the helmet holder, insert the key in the lock and turn it as shown. To lock the helmet holder, replace the holder in its original position.

WARNING

Never ride with a helmet in the helmet holder. The helmet may hit objects, causing loss of control and possibly an accident.
**Storage box**

1. Storage box cover  
2. Storage box

The storage box is located behind the storage box cover on the left side.

**Rear shock absorber adjustment**

a. Increase spring preload  
b. Decrease spring preload

Each shock absorber is equipped with a spring preload adjuster. Adjust spring preload as follows. Turn the adjusting ring in direction ③ to increase spring preload and in direction ④ to decrease spring preload.

WARNING
Always adjust each shock absorber to the same setting. Uneven adjustment can cause poor handling and loss of stability.

EAD30101
Sidestand
This model is equipped with an ignition circuit cut-off system. The motorcycle must not be ridden when the sidestand is down. The sidestand is located on the left side of the frame. (Refer to page 7-1 for an explanation of this system.)

EUU68901

WARNING
This motorcycle must not be operated with the sidestand in the down position. If the stand is not properly retracted, it could contact the ground and distract the operator, resulting in a possible loss of control. Yamaha has designed into this motorcycle a lockout system to assist the operator in fulfilling the responsibility of retracting the sidestand. Please check carefully the operating instructions listed below and if there is any indication of a malfunction, return the motorcycle to a Yamaha dealer immediately for repair.
Sidestand/clutch switch operation check

Check the operation of the sidestand switch and clutch switch against the information below.

EAD30202

**WARNING**

- Be sure to use the centerstand during this inspection.
- If improper operation is noted, consult a Yamaha dealer.

1. Turn main switch to "ON" and engine stop switch to "RUN".
2. Transmission is in gear and sidestand is up.
3. Pull in clutch lever and push start switch.

- Engine will start.
- Clutch switch is OK.
- Sidestand is down.
- Engine will stall.
- Sidestand switch is OK.

**NOTE:**
Pre-operation checks should be made each time the motorcycle is used. Such an inspection can be thoroughly accomplished in a very short time, and the added safety it assures is more than worth the time involved.

**WARNING**
If any item in the Pre-Operation Checks is not working properly, have it inspected and repaired before operating the motorcycle.
Brakes

1. Brake lever and brake pedal
   Check for correct free play in the front brake lever and rear brake pedal and adjust if necessary. (See page 8-17 for details.) Make sure the brakes are working properly by checking at low speed shortly after starting out.

2. Brake fluid
   Check the brake fluid level. Fill the master cylinder with brake fluid if necessary. (See page 8-21 for details.)

   Recommended brake fluid: DOT 4

   NOTE:
   If DOT 4 is not available, DOT 3 can be used.

3. Check the disc pads.
   Refer to page 8-20.

4. Check the brake shoes.
   Refer to page 8-20.

   NOTE:
   When this brake service is necessary, consult a Yamaha dealer.
Front brake fluid leakage
Apply the brake for a few minutes. Check to see if any brake fluid leaks out from the pipe joints or the master cylinder.

**CAUTION**
Brake fluid may deteriorate painted surfaces or plastic parts. Never spill any fluid. If spilled, clean it up immediately.

**WARNING**
If brake fluid leakage is found, ask a Yamaha dealer for immediate repairs. Such leakage could indicate a hazardous condition.

Throttle grip

a Free play

Turn the throttle grip to see if it operates properly. Make sure the grip returns by spring force when released. There should be a free play of 3 ~ 5 mm at the throttle grip. If the free play is incorrect, ask a Yamaha dealer to make this adjustment.

Clutch
Check the free play in the clutch lever and make sure the clutch operates properly. If the free play is incorrect, adjust it. (See page 8-23 for details.)
**Engine oil**

Make sure the engine oil is at the specified level. Fill with oil as necessary. (See page 8-6 for details.)

Recommended engine oil classification:
API Service "SE", "SF" type or equivalent (e.g. "SF-SE", "SF-SE-CC", "SF-SE-SD" etc.)

Oil quantity:
Total amount: 3.6 L
Periodic oil change: 3.0 L
With oil filter replacement: 3.1 L

---

**CAUTION**

Do not put in any chemical additives. Also, be sure not to use oils labeled "ENERGY CONSERVING II" or higher. Engine oil also lubricates the clutch and additives could cause clutch slippage.

---

**Final gear oil**

Make sure the final gear oil is at the specified level. Fill with oil as necessary. (See page 8-10 for details.)

Recommended oil:
SAE 80 API GL-4 Hypoid gear oil
If desired, an SAE 80W90 hypoid gear oil may be used for all conditions.

**NOTE:**
"GL-4" is a quality and additive rating. "GL-5" or "GL-6" rated hypoid gear oils may also be used.
Tires
To ensure maximum performance, long service and safe operation, note the following:

1. Tire air pressure
   Always check and adjust the tire pressure before operating the motorcycle.

### WARNING

Tire inflation pressure should be checked and adjusted when the temperature of the tire equals the ambient air temperature. Tire inflation pressure must be adjusted according to total weight of cargo, rider, passenger, and accessories (fairing, saddlebags, etc. if approved for this model), and vehicle speed.

<tr>
<td>90 kg load ~ Maximum load*</td>
<td>200 kPa (2.5 kg/cm², 2.5 bar)</td>
</tr>
</tbody>
</table>

*Load is the total weight of cargo, rider, passenger and accessories.
WARNING

Proper loading of your motorcycle is important for several characteristics of your motorcycle, such as handling, braking, performance and safety. Do not carry loosely packed items that can shift. Securely pack your heaviest items close to the center of the motorcycle, and distribute the weight evenly from side to side. Properly adjust the suspension for your load, and check the condition and pressure of your tires. NEVER OVERLOAD YOUR MOTORCYCLE. Make sure the total weight of the cargo, rider, passenger, and accessories (fairing, saddlebags, etc. if approved for this model) does not exceed the maximum load of the motorcycle. Operation of an overloaded motorcycle could cause tire damage, an accident, or even injury.

2. Tire inspection
Always check the tires before operating the motorcycle. If a tire tread shows crosswise lines (minimum tread depth), if the tire has a nail or glass fragments in it, or if the side wall is cracked, contact a Yamaha dealer immediately and have the tire replaced.

---

**WARNING**

Operating the motorcycle with excessively worn tires decrease riding stability and can lead to loss of control. Have excessively worn tires replaced by a Yamaha dealer immediately. Brakes, tires, and related wheel parts replacement should be left to a Yamaha Service Technician.

---

**NOTE:**

These limits may be different by regulation from country to country. If so, conform to the limits specified by the regulations of your own country.

---

**Cast wheels**

To ensure maximum performance, long service, and safe operation, note the following:

1. Always inspect the wheels before a ride. Check for cracks, bends or warpage of the wheels. If any abnormal condition exists in a wheel, consult a Yamaha dealer. Do not attempt even small repairs to the wheel. If a wheel is deformed or cracked, it must be replaced.
2. Tires and wheels should be balanced whenever either one is changed or replaced. Failure to have a wheel balanced can result in poor performance, adverse handling characteristics and shortened tire life.

3. Ride at moderate speeds after changing a tire since the tire surface must first be broken in for it to develop its optimal characteristics.

4. After repairing or replacing a tire, tighten the valve stem locknut to the specified torque.

</tbody>
</table>

**Chassis fasteners**
Always check the tightness of all chassis nuts, bolts and screws before a ride. Take the motorcycle to a Yamaha dealer or refer to the Service Manual for correct tightening torque.

**Lights, signals and switches**
Check all the lights, meter lights and indicator lights to make sure they are in working condition. Check the operation of the handlebar switches and main switch.

**Battery**
Check the fluid level and fill if necessary. Use only distilled water if refilling is necessary. (See page 8-27 for details.)
Fuel

1. Filler tube
2. Fuel level

Make sure there is sufficient fuel in the tank.

WARNING
Do not overfill the fuel tank. Avoid spilling fuel on the hot engine. Do not fill the fuel tank above the bottom of the filler tube as shown in the illustration or it may overflow when the fuel heats up later and expands.

CAUTION
Always wipe off spilled fuel immediately with a dry and clean soft cloth. Fuel may deteriorate painted surfaces or plastic parts.

Recommended fuel:
Regular gasoline
For Australia:
Unleaded fuel only
Fuel tank capacity:
Total:
14.5 L
Reserve:
2.5 L
OPERATION AND IMPORTANT RIDING POINTS

WARNING

1. Before riding this motorcycle, become thoroughly familiar with all operating controls and their functions. Consult a Yamaha dealer regarding any control or function that you do not thoroughly understand.

2. Never start your engine or let it run for any length of time in a closed area. The exhaust fumes are poisonous and can cause loss of consciousness and death within a short time. Always operate your motorcycle in an area with adequate ventilation.

3. Before starting out, always be sure the sidestand is up. Failure to retract the sidestand completely can result in a serious accident when you try to turn a corner.

NOTE: ___________________________

This motorcycle is equipped with an ignition circuit cut-off system.

1. The engine can be started only under the following conditions:
   a. The transmission is in neutral.
   b. The sidestand is up, the transmission is in gear and the clutch is disengaged.

2. The motorcycle must not be ridden when the sidestand is down.

WARNING

Before going through the following steps, check the function of the sidestand switch and clutch switch. (Refer to page 5-17.)
TURN THE MAIN SWITCH TO "ON" AND THE ENGINE STOP SWITCH TO "RUN".

IF TRANSMISSION IS IN NEUTRAL AND SIDESTAND IS DOWN,

PUSH THE START SWITCH. ENGINE WILL START.

RETRACT SIDESTAND AND PUT TRANSMISSION IN GEAR.

MOTORCYCLE CAN BE RIDDEN.

IF TRANSMISSION IS IN GEAR AND SIDESTAND IS UP,

PULL IN THE CLUTCH LEVER AND PUSH THE START SWITCH. ENGINE WILL START.

MOTORCYCLE CAN BE RIDDEN.
1. Turn the fuel cock to "ON".
2. Turn the main switch to "ON" and the engine stop switch to "RUN".

CAUTION:
If the fuel indicator light comes on, check the fuel level. If necessary, fill the tank with fuel.

3. Shift the transmission into neutral.

NOTE:
When the transmission is in neutral, the neutral indicator light should be on. If the light does not come on, ask a Yamaha dealer to inspect it.

4. Turn on the starter "CHOKE" and completely close the throttle grip.
5. Start the engine by pushing the start switch.

NOTE:
If the engine fails to start, release the start switch, wait a few seconds, then try again. Each attempt should be as short as possible to preserve the battery. Do not crank the engine more than 10 seconds on any one attempt.

CAUTION:
The oil level indicator light and fuel indicator light should come on when the start switch is pushed and should go off when the start switch is released. If the oil level indicator light flickers or remains on, immediately stop the engine and check the engine oil level and for oil leakage. If necessary, fill the engine with oil and check to see that the oil level indicator light goes off. If not, consult a Yamaha dealer.
6. After starting the engine, move the starter "CHOKE" halfway back to the warming up position.

**NOTE:**
For maximum engine life, always warm up the engine before starting off. Never accelerate hard with a cold engine.

7. After warming up the engine, turn off the starter "CHOKE" completely.

**NOTE:**
The engine is warm when it responds normally to the throttle with the starter "CHOKE" turned off.

---

**CAUTION:**
See the "Engine break-in" section prior to operating the motorcycle for the first time.
**Shifting**
The transmission lets you control the amount of power you have available at a given speed for starting, accelerating, climbing hills, etc. The use of the shift pedal is shown in the illustration. (Page 5-9)
To shift into neutral, depress the shift pedal repeatedly until it reaches the end of its travel, then raise the pedal slightly.

---

**CAUTION:**

1. **Do not coast for long periods with the engine off, and do not tow the motorcycle a long distance.** Even with gears in neutral, the transmission is only properly lubricated when the engine is running. Inadequate lubrication may damage the transmission.

2. **Always use the clutch when changing gears.** The engine, transmission, and driveline are not designed to withstand the shock of forced shifting and can be damaged by shifting without using the clutch.

---

**Engine break-in**
There is never a more important period in the life of your motorcycle than the period between zero and 1,000 km. For this reason we ask that you carefully read the following material. Because the engine is brand new, you must not put an excessive load on it for the first 1,000 km. The various parts in the engine wear and polish themselves to the correct operating clearances. During this period, prolonged full throttle operation, or any condition which might result in excessive heating of the engine, must be avoided.

---

1. **0 ~ 150 km:**
   Avoid operation above 4,000 r/min. Stop the engine and let it cool for 5 to 10 minutes after every hour of operation. Vary the speed of the motorcycle from time to time. Do not operate it at one set throttle position.
2. 150 ~ 500 km:
   Avoid prolonged operation above 5,000 r/min. Rev the motorcycle freely through the gears, but do not use full throttle at any time.

3. 500 ~ 1,000 km:
   Avoid prolonged full throttle operation. Avoid cruising speeds in excess of 6,000 r/min.

---

**CAUTION**

After 1,000 km of operation, be sure to replace the engine oil, oil filter and final gear oil.

---

4. 1,000 km and beyond:
   Full throttle can be used.

---

**CAUTION**

- Never let engine speeds enter the red zone.
- If any engine trouble should occur during the break-in period, consult a Yamaha dealer immediately.

---

**WARNING**

Parking
When parking the motorcycle, stop the engine and remove the ignition key.

---

**WARNING**

The exhaust system is hot. Park the motorcycle in a place where pedestrians or children are not likely to touch the motorcycle. Do not park the motorcycle on a slope or soft ground; the motorcycle may overturn.
PERIODIC MAINTENANCE AND MINOR REPAIR

Periodic inspection, adjustment and lubrication will keep your motorcycle in the safest and most efficient condition possible. Safety is an obligation of the motorcycle owner. The maintenance and lubrication schedule chart should be considered strictly as a guide to general maintenance and lubrication intervals. YOU MUST TAKE INTO CONSIDERATION THAT WEATHER, TERRAIN, GEOGRAPHICAL LOCATIONS, AND A VARIETY OF INDIVIDUAL USES ALL TEND TO DEMAND THAT EACH OWNER ALTER THIS TIME SCHEDULE TO SHORTER INTERVALS TO MATCH THE ENVIRONMENT. The most important points of motorcycle inspection, adjustment, and lubrication are explained in the following pages.

WARNING

If you are not familiar with motorcycle service, this work should be done by a Yamaha dealer.
Tool kit

1. Open
2. Tool kit

The service information included in this manual is intended to provide you, the owner, with the necessary information for completing some of your own preventive maintenance and minor repairs. The tools provided in the owner's tool kit are to assist you in the performance of periodic maintenance. However, some other tools such as a torque wrench are also necessary to perform the maintenance correctly.

NOTE:
If you do not have necessary tools required during a service operation, take your motorcycle to a Yamaha dealer for service.

WARNING
Modifications to this motorcycle not approved by Yamaha may cause loss of performance, and render it unsafe for use. Consult a Yamaha dealer before attempting any changes.

* : It is recommended that these items be serviced by a Yamaha dealer.

** : Lithium soap base grease
NOTE:

Brake fluid replacement.

1. When disassembling the master cylinder or caliper cylinder, replace the brake fluid. Normally check the brake fluid level and fill the master cylinder with fluid as required.

2. On the inner parts of the master cylinder and caliper cylinder, replace the oil seals every two years.

3. Replace the brake hoses every four years, or if cracked or damaged.
Engine oil

1. Oil level inspection
   a. Place the motorcycle on the center-stand. Warm up the engine for several minutes.

NOTE:

Be sure the motorcycle is positioned straight up when checking the oil level. A slight tilt toward the side can result in false readings.

b. With the engine stopped, check the oil level through the level window located at the lower part of the left side crankcase cover.

NOTE:

Wait a few minutes until the oil level settles before checking.

c. The oil level should be between the maximum and minimum marks. If the level is low, fill the engine with sufficient oil to raise it to the specified level.
2. Engine oil and oil filter replacement
   a. Warm up the engine for a few minutes.
   b. Stop the engine. Place an oil pan under the engine and remove the oil filler cap.
   c. Remove the drain plug and drain the oil.
1. Oil filter cover  
2. Oil filter bolt (× 3)

d. Remove the oil filter cover bolts and oil filter.
e. Reinstall the drain plug and tighten it to the specified torque.

**Tightening torque:**
- Drain plug:  
  43 Nm (4.3 m·kg)

1. Proper O-ring position  
2. Oil filter

f. Install the new oil filter, O-rings and the filter cover. Tighten the oil filter cover bolts to the specified torque.

**Tightening torque:**
- Oil filter cover bolt:  
  10 Nm (1.0 m·kg)

**NOTE:**
Make sure the O-rings are seated properly.
g. Fill engine with oil. Install the oil filler cap and tighten.

Recommended oil:
See page 6-5.

Oil quantity:
Total amount:
3.6 L
Periodic oil change:
3.0 L
With oil filter replacement:
3.1 L

h. Start the engine and warm up for a few minutes. While warming up, check for oil leakage. If oil leakage is found, stop the engine immediately, and check for the cause.

i. After the engine is started, the oil level indicator light should go off if oil is filled to specified level.

CAUTION:

- Do not put in any chemical additives. Engine oil also lubricates the clutch and additives could cause clutch slippage.
- Be sure no foreign material enters the crankcase.

If the indicator light flickers or remains on, immediately stop the engine and consult with a Yamaha dealer.
Final gear oil

1. Final gear oil
2. Correct oil level
3. Oil filler bolt

**WARNING**

Do not let foreign material enter the final gear case. Be sure oil does not get on the tire or wheel.

1. Oil level inspection
   a. Place the motorcycle on a level place and place it on the centerstand. The engine should be cool at ambient temperature.
   b. Remove the oil filler bolt and check the oil level. The oil level should be at the brim of the hole. Fill with oil as necessary.

2. Gear oil replacement
   a. Place an oil pan under the final gear case.
   b. Remove the oil filler bolt and the drain plug to drain the oil.
c. Reinstall and tighten the drain plug to the specified torque.

Tightening torque:
Drain plug:
23 Nm (2.3 m·kg)

d. Fill the gear case to the brim of the hole with the recommended oil.

Final gear oil:
Recommended oil:
See page 6-5.
Oil quantity:
0.2 L

e. Reinstall and tighten the oil filler bolt to the specified torque.

Tightening torque:
Oil filler bolt:
23 Nm (2.3 m·kg)

f. After replacement of the final gear oil, be sure to check for oil leaks.
The air filter should be cleaned at the specified intervals. It should be cleaned more frequently if you are riding in unusually wet or dusty areas.

1. Remove the air filter case assembly.

2. Remove the air filter case cover.
3. Remove the air filter.

4. Tap the air filter lightly to remove most of the dust and dirt. Blow out the remaining dirt with compressed air as shown. If the air filter is damaged, replace it.

5. Reassemble by reversing the removal procedure.
CAUTION

- Make sure the air filter is properly seated in the air filter case.
- The engine should never be run without the air filter installed. Excessive piston and/or cylinder wear may result.

Carburetor adjustment
The carburetors are important parts of the engine and require very sophisticated adjustment. Most adjustments should be left to a Yamaha dealer who has the professional knowledge and experience to do so. However, the idle speed may be adjusted by the owner as part of routine maintenance.

The carburetors were set at the Yamaha factory after many tests. If they are changed, poor engine performance and damage may result.
**Idle speed adjustment**

1. Throttle stop screw

1. Start the engine and warm it up for a few minutes (normally, 1 or 2 minutes) at approximately 1,000 to 2,000 r/min. Occasionally rev the engine to 4,000 to 5,000 r/min. The engine is warm when it quickly responds to the throttle.
2. Set the idle to the specified engine speed by adjusting the throttle stop screw; turn the screw in to increase engine speed, and out to decrease engine speed.

**Standard idle speed:**
950 ~ 1,050 r/min

**NOTE:**
If the specified idle speed cannot be obtained by performing the above adjustment, consult a Yamaha dealer.

**Valve clearance adjustment**
The correct valve clearance changes with use, resulting in improper fuel/air supply or engine noise. To prevent this, the valve clearance must be adjusted regularly. This adjustment however, should be left to a professional Yamaha service technician.
Spark plug inspection

The spark plug is an important engine component and is easy to inspect. The condition of the spark plug can indicate the condition of the engine. Normally, all spark plugs from the same engine should have the same color on the white insulator around the center electrode. The ideal color at this point is a medium-to-light tan color for a motorcycle that is being ridden normally. If one spark plug shows a distinctly different color, there could be something wrong with the engine.

Do not attempt to diagnose such problems yourself. Instead, take the motorcycle to a Yamaha dealer. You should periodically remove and inspect the spark plugs because heat and deposits will cause any spark plug to slowly break down and erode. If electrode erosion becomes excessive, or if carbon and other deposits are excessive, you should replace the spark plug with the specified plug.

1. Spark plug gap

Specified spark plug:
BPR7ES (NGK) or
W22EPR-U (NIPPONDENSO)

Before installing any spark plug, measure the electrode gap with a wire thickness gauge. Adjust the gap to specification.

Spark plug gap:
0.7 ~ 0.8 mm
When installing the spark plug, always clean the gasket surface and use a new gasket. Wipe off any grime from the threads and tighten the spark plug to the specified torque.

**Tightening torque:**

**Spark plug:**

20 Nm (2.0 m·kg)

**NOTE:**

If a torque wrench is not available when you are installing a spark plug, a good estimate of the correct torque is 1/4 to 1/2 turn past finger tight. Have the spark plug tightened to the specified torque as soon as possible.

---

**Front brake lever free play adjustment**

The free play at the front brake lever should be 2 ~ 5 mm.

1. Loosen the locknut.
2. Turn the adjusting bolt so that the brake lever movement is 2 ~ 5 mm before the bolt contacts the master cylinder piston.
3. After adjusting, tighten the locknut.
**WARNING**

- Check the brake lever free play. Be sure the brake is working properly.
- A soft or spongy feeling in the brake lever can indicate the presence of air in the brake system. This air must be removed by bleeding the brake system before the motorcycle is operated. Air in the system will cause greatly diminished braking capability and can result in loss of control and an accident. Have a Yamaha dealer inspect and bleed the system if necessary.

**Rear brake pedal height and free play adjustment**

1. Adjusting bolt (for pedal height)
2. Locknut
3. Footrest
4. Pedal height: 40 mm
5. Free play 20 ~ 30 mm

**WARNING**

It is advisable to have a Yamaha dealer make this adjustment.

1. Pedal height
   a. Loosen the locknut.
   b. By turning the adjusting bolt clockwise or counterclockwise, adjust the brake pedal position as shown.
c. Tighten the locknut.

**WARNING**

After adjusting the pedal height adjust brake pedal free play.

1. Adjusting nut
   a. Reduce free play
   b. Increase free play

2. Free play
   The rear brake pedal free play should be adjusted to 20 ~ 30 mm at the brake pedal end. Turn the adjusting nut on the brake rod in direction a to reduce free play or in direction b to increase free play.

**WARNING**

Check the operation of the brake light after adjusting the rear brake.
Brake light switch adjustment

1. Main body
2. Adjusting nut

The brake light switch is operated by movement of the brake pedal. To adjust, hold the main body of the switch so it does not rotate and turn the adjusting nut. Proper adjustment is achieved when the brake light comes on just before the brake begins to take effect.

Checking the front brake pads and rear brake shoes

1. Wear indicator
2. Wear limit 0.5 mm

A wear indicator is provided on each brake. This indicator allows checking of brake pad/shoe wear without disassembling the brake.

FRONT
Apply the brake and inspect the wear indicator. If the brake pads are worn to the wear limit, have a Yamaha dealer replace the pads.
Inspecting the brake fluid level

1 Minimum level mark “LOW”

Insufficient brake fluid may let air enter the brake system, possibly causing the brakes to become ineffective. Before riding, check that the brake fluid is above the minimum level and fill when necessary.

Observe these precautions:
1. When checking the fluid level, make sure the top of the master cylinder is level by turning the handlebars.

EAH82601
REAR
Apply the brake and inspect the wear indicator. If the indicator reaches the wear limit line, ask a Yamaha dealer to replace the shoes.
2. Use only the designated quality brake fluid. Otherwise, the rubber seals may deteriorate, causing leakage and poor brake performance.

**Recommended brake fluid: DOT 4**

**NOTE:**
If DOT 4 is not available, DOT 3 can be used.

3. Refill with the same type of brake fluid. Mixing fluids may result in a harmful chemical reaction and lead to poor brake performance.

4. Be careful that water does not enter the master cylinder when refilling. Water will significantly lower the boiling point of the fluid and may result in vapor lock.

5. Brake fluid may deteriorate painted surfaces or plastic parts. Always clean up spilled fluid immediately.

6. Have a Yamaha dealer check the cause if the brake fluid level goes down.

**Brake fluid replacement**

1. Complete fluid replacement should be done only by trained Yamaha service personnel.

2. Have a Yamaha dealer replace the following components during periodic maintenance or when they are damaged or leaking.
   a. Replace all rubber seals every two years.
   b. Replace all hoses every four years.
**Clutch lever free play adjustment**

1. Locknut
2. Adjusting bolt

A. 8 ~ 12 mm
a. Increase free play
b. Decrease free play

The clutch lever free play should be adjusted to 8 ~ 12 mm. If the free play is incorrect, adjust as follows.
1. Loosen the locknut.
2. Turn the adjusting bolt at the clutch lever in direction A to increase free play or in direction B to decrease free play.
3. Tighten the locknut.

**NOTE:**
If proper adjustment cannot be obtained or the clutch does not work correctly, ask a Yamaha dealer to inspect the internal clutch mechanism.

**Cable inspection and lubrication**

**WARNING**
Damage to the outer housing of cables may allow internal rusting and cause interference with cable movement. Replace damaged cables as soon as possible to prevent unsafe conditions.

Lubricate the inner cable and the cable end. If it does not operate smoothly, ask a Yamaha dealer to replace them.

**Recommended lubricant:**
SAE 10W30 motor oil
Throttle cable and grip lubrication
The throttle twist grip assembly should be greased at the time that the cable is lubricated, since the grip must be removed to get at the end of the throttle cable. After removing the screws, hold the end of the cable up in the air and put in several drops of lubricant. With the throttle grip disassembled, coat the metal surface of the grip assembly with a suitable all-purpose grease.

Brake and shift pedal lubrication
Lubricate the pivoting parts.

Recommended lubricant:
SAE 10W30 motor oil

Brake and clutch lever lubrication
Lubricate the pivoting parts.

Recommended lubricant:
SAE 10W30 motor oil

Center and sidestand lubrication
Lubricate the pivoting and mating joints. Check to see that the center and sidestand move up and down smoothly.

Recommended lubricant:
SAE 10W30 motor oil

WARNING
If the center and/or sidestand does not move smoothly, consult a Yamaha dealer.
Front fork inspection

b. Push down hard on the handlebars several times and check if the fork rebounds smoothly.

---

If any damage or unsmooth movement is found with the front fork, consult a Yamaha dealer.

---

**WARNING**

Securely support the motorcycle so there is no danger of it falling over.

1. Visual check
   Check for scratches or damage on the inner tube and excessive oil leakage from the front fork.

2. Operation check
   Place the motorcycle on a level place.
   a. Hold the motorcycle in an upright position and apply the front brake.
**Steering inspection**

Periodically inspect the condition of the steering. Worn out or loose steering bearings may be dangerous. Place a stand under the engine to raise the front wheel off the ground. Hold the lower end of the front forks and try to move them forward and backward. If any free play can be felt, ask a Yamaha dealer to inspect and adjust the steering. Inspection is easier if the front wheel is removed.

---

**WARNING**

Securely support the motorcycle so there is no danger of it falling over.

---

**Wheel bearings**

If there is play in the front or rear wheel hub or if the wheel does not turn smoothly, have a Yamaha dealer inspect the wheel bearings. The wheel bearings should be inspected according to the Maintenance Schedule.
Battery

WARNING

Battery electrolyte is poisonous and dangerous, causing severe burns, etc. It contains sulfuric acid. Avoid contact with skin, eyes or clothing.

Antidote:
EXTERNAL: Flush with water.
INTERNAL: Drink large quantities of water or milk. Follow with milk of magnesia, beaten egg, or vegetable oil. Call a physician immediately.

EYES: Flush with water for 15 minutes and get prompt medical attention. Batteries produce explosive gases. Keep sparks, flame, cigarettes etc., away. Ventilate when charging or using in an enclosed space. Always shield your eyes when working near batteries.

KEEP OUT OF REACH OF CHILDREN.

Check the level of the battery electrolyte and make sure that the terminals are tight. Fill with distilled water if the electrolyte level is low.

CAUTION

When inspecting the battery, be sure the breather pipe is routed correctly. If the breather pipe is positioned in such a way as to cause battery electrolyte or gas to exit onto the frame, structural and cosmetic damage to the motorcycle can occur.
Storage

1. When the motorcycle will not be used for a month or longer, remove the battery and store it in a cool, dark place. Completely recharge the battery before reinstalling.

2. If the battery will be stored for longer than two months, check the specific gravity of the fluid at least once a month and recharge the battery when it is too low.

3. Always make sure the connections are correct when putting the battery back in the motorcycle. Make sure the breather pipe is properly connected and is not damaged or obstructed.

Replenishing the battery fluid

A poorly maintained battery will corrode and discharge quickly. The battery fluid should be checked at least once a month. The level should be between the minimum level and maximum level marks. Use only distilled water if refilling is necessary.

**CAUTION**

Normal tap water contains minerals which are harmful to a battery; therefore, refill only with distilled water.
Fuse replacement

Main
The main fuse case is located under the seat.

Sub
The sub fuse block is located under the indicator lights panel. Remove the screws and then lift upward to remove the panel. If any fuse is blown, turn off the main switch and the switch of the circuit in question. Install a new fuse of specified amperage. Turn on the switches and see if the electrical device operates. If the fuse immediately blows again, consult a Yamaha dealer.
Do not use fuses of higher amperage rating than those recommended. Substitution of a fuse of improper rating can cause extensive electrical system damage and possibly a fire.

1. Holding screw (x 2)

This motorcycle is equipped with a quartz bulb headlight. If the headlight bulb burns out, replace the bulb as follows:

1. Remove the screws holding the light unit assembly.
2. Remove the connectors, the light unit assembly and then the bulb holder cover.

3. Turn the bulb holder counterclockwise to remove it and remove the defective bulb.

**WARNING**

Keep flammable products and your hands away from a bulb while it is on, as it is hot. Do not touch a bulb until it cools down.

4. Put a new bulb into position and secure it in place with the bulb holder.
Avoid touching the glass part of a bulb. Keep it free from oil; otherwise, the transparency of the glass, life of the bulb, and luminous flux will be adversely affected. If oil gets on a bulb, thoroughly clean it with a cloth moistened with alcohol or lacquer thinner.

5. Install the bulb holder cover, connectors and the light unit assembly. If the headlight beam adjustment is necessary, ask a Yamaha dealer to make that adjustment.
Front wheel removal

1. Speedometer cable

---

**WARNING**

- It is advisable to have a Yamaha dealer service the wheel.
- Securely support the motorcycle so there is no danger of it falling over.

1. Place the motorcycle on the centerstand.
2. Remove the speedometer cable from the front wheel side.
3. Remove the front fork brace together with the fender.
4. Loosen the pinch bolt.
5. Remove the wheel axle. Make sure the motorcycle is properly supported.

NOTE: Do not depress the brake lever when the disc and caliper are separated.

6. Lower the wheel until the discs come off the calipers. Turn the calipers outward so they do not obstruct the wheel, then remove the wheel.
Front wheel installation

When installing the front wheel, reverse the removal procedure. Pay attention to the following points:

1. Make sure the wheel hub and the speedometer gear unit housing are installed with the projections meshed into the slots.
2. Make sure there is enough gap between the brake pads before inserting the brake discs.
3. Make sure the slot in the speedometer gear unit housing fits over the stopper on the front fork outer tube.

4. Tighten the wheel axle to the specified torque.

Tightening torque:
Wheel axle:
105 Nm (10.5 m·kg)

5. Before tightening the pinch bolt, push down hard on the handlebars several times to check for proper fork operation.
6. Tighten the pinch bolt to the specified torque.
7. Tighten the front fork brace bolts to the specified torque.

Tightening torque:
Pinch bolt:
20 Nm (2.0 m·kg)

Front fork brace bolt:
9 Nm (0.9 m·kg)

**WARNING**

- It is advisable to have a Yamaha dealer service the wheel.
- Securely support the motorcycle so there is no danger of it falling over.

1. Place the motorcycle on the centerstand.
2. Remove the cotter pin, nut and tension bar bolt from the brake shoe plate.
3. Remove the brake adjusting nut and brake rod from the brake cam lever.

4. Remove the axle nut cotter pin and the axle nut.
5. Loosen the wheel axle pinch bolt and pull out the wheel axle.
6. Move the wheel to the right to separate it from the final gear case and remove the rear wheel.

When installing the rear wheel, reverse the removal procedure. Pay attention to the following points:

1. Apply a light coating of lithium base grease to final gear case splines and rear wheel hub splines.
2. Make sure the splines on the wheel hub fit into the final gear case.
3. Tighten the following parts to the specified torque, and make sure a new cotter pin is installed.
WARNING

Always use a new cotter pin.

4. Adjust the rear brake free play. (see page 8-18)

WARNING

Check the operation of the brake light after adjusting the rear brake.

Troubleshooting

Although Yamaha motorcycles receive a rigid inspection before shipment from the factory, trouble may occur during operation.

Any problem in the fuel, compression, or ignition systems can cause poor starting and loss of power. The troubleshooting chart describes a quick, easy procedure for making checks.

If your motorcycle requires any repair, bring it to a Yamaha dealer. The skilled technicians at a Yamaha dealership have the tools, experience, and know-how to properly service your motorcycle. Use only genuine Yamaha parts on your motorcycle. Imitation parts may look like Yamaha parts, but they are often inferior. Consequently, they have a shorter service life and can lead to expensive repair bills.
**Troubleshooting chart**

**WARNING**
Never check the fuel system while smoking or in the vicinity of an open flame.

1. **Fuel**
   - Check if there is fuel in the fuel tank
     - There is fuel
       - Turn the fuel cock to "ON"
     - Some fuel
       - Turn the fuel cock to "RES" (no fuel)
     - No fuel
       - Supply fuel
       - Turn the fuel cock to "PRI" (no fuel)

2. **Compression**
   - Use electric starter
     - There is compression
       - Compression normal (no fuel)
     - No compression
       - Ask a Yamaha dealer to inspect

3. **Ignition**
   - Remove spark plug(s) and check electrode
     - Wet
       - Wipe clean with dry cloth
     - Dry
       - Attach plug cap and ground to chassis
       - Use electric starter
       - Spark good
         - Ignition system normal (no fuel)
       - Spark weak
         - Adjust plug gap or replace plug
     - No spark
       - Ask a Yamaha dealer to inspect

4. **Battery**
   - Use electric starter
     - Engine turns over quickly
       - Battery good (no fuel)
     - Engine turns over slowly
       - Check fluid, recharge, check connections
       - Ask a Yamaha dealer to inspect (no fuel)

CLEANING AND STORAGE

A. CLEANING
Frequent, thorough cleaning of your motorcycle will not only enhance its appearance but will improve its general performance and extend the useful life of many components.

1. Before cleaning the motorcycle:
   a. Block off the end of the exhaust pipes to prevent water entry; a plastic bag and strong rubber band may be used.
   b. Make sure the spark plugs and all filler caps are properly installed.

2. If the engine case is excessively greasy, apply degreaser with a paint brush. Do not apply degreaser to wheel axles.

3. Rinse the dirt and degreaser off with a garden hose. Use only enough pressure to do the job.

4. Once the majority of the dirt has been hosed off, wash all surfaces with warm water and mild, detergent-type soap. An old toothbrush or bottle brush is handy for hard-to-get-at places.

5. Rinse the motorcycle off immediately with clean water and dry all surfaces with a chamois, clean towel, or soft absorbent cloth.

Excessive hose pressure may cause water seepage and deterioration of wheel bearings, front fork, brakes, transmission seals and electrical parts.
Many expensive repair bills have resulted from improper high pressure detergent applications such as those available in coin-operated car washers.
6. Clean the seat with a vinyl upholstery cleaner to keep the cover pliable and glossy.

7. Automotive-type wax may be applied to all painted and chrome-plated surfaces. Avoid combination cleaner-waxes. Many contain abrasives which may mar the paint or protective finish. When finished, start the engine and let it idle for several minutes.
B. STORAGE

Long term storage (60 days or more) of your motorcycle will require some preventive procedures to guard against deterioration. After thoroughly cleaning the motorcycle, prepare for storage as follows:

1. Fill the fuel tank with fuel.
2. Drain the carburetor float bowls.
3. Remove the spark plugs, pour about one tablespoon of SAE 10W30 or 20W40 motor oil in each spark plug hole and reinstall the spark plugs. Turn the engine over several times (ground spark plug leads) to coat the cylinder walls with oil.
4. Lubricate all control cables.
5. Block up the frame to raise both wheels off the ground.
6. Tie a plastic bag over the exhaust pipe outlets to prevent moisture from entering.
7. If storing in a humid or salt-air atmosphere, coat all exposed metal surfaces with a light film of oil. Do not apply oil to any rubber parts or the seat cover.
8. Remove the battery and fully charge it. Store it in a cool, dry place and completely recharge it once a month. Do not store the battery in an excessively warm or cold place (less than 0°C or more than 30°C). See page 8-28 for battery storage precautions.

11-1
NOISE REGULATION
(FOR Australia)

"TAMPERING WITH NOISE CONTROL SYSTEM PROHIBITED"

Owners are warned that the law may prohibit:

(a) The removal or rendering inoperative by any person other than for purposes of maintenance, repair or replacement, of any device or element of design incorporated into any new vehicle for the purpose of noise control prior to its sale or delivery to the ultimate purchaser or while it is in use; and

(b) the use of the vehicle after such device or element of design has been removed or rendered inoperative by any person.
